

Note: This IBM PC BIOS API call is for DOS/Win16 personality only. Use [Family API](#) for portability.

Note: [osFree Macro Library](#) provides macros for most of functions

2022/03/13 05:41 · prokushev · [0 Comments](#)

Int 10H, AH=08H

Version

IBM 5150 and higher

Brief

Get character and attribute undr cursor

osFree Macro Library

[@GetChAtr/@GetCharAtr](#)

Family API

[VioReadCellStr](#) [VioReadCharStr](#)

Parameters

- AH = 08h
- BH = page number

Return

- AH - attribute
- AL - character

Macro

```
INCLUDE BIOS.INC
```

```
@GetChAtr 0
```

Notes

- for monochrome displays, a foreground of 1 with background 0 is underlined
- the blink bit may be reprogrammed to enable intense background colors using AX=1003h or by programming the CRT controller
- the foreground intensity bit (3) can be programmed to switch between character sets A and B on EGA and VGA cards, thus enabling 512 simultaneous characters on screen. In this case the bit's usual function (intensity) is regularly turned off.
- in graphics modes, only characters drawn with white foreground pixels are matched by the pattern-comparison routine
- on the Tandy 2000, BH=FFh specifies that the current page should be used
- because of the IBM BIOS specifications, there may exist some clone BIOSes which do not preserve SI or DI; the Novell DOS kernel preserves SI, DI, and BP before many INT 10h calls to avoid problems due to those registers not being preserved by the BIOS.
- some IBM PC ROM BIOSes destroy BP when in graphics modes
- Text based on [Ralf Brown Interrupt List Release 61](#)
