

# Command History Window

## Command History Window Keys:

<b>PgUp</b> or <b>PgDn</b>	(from the command line) Open the command history window.
<b>UpArrow</b> 	Scroll the display up one line.
<b>DownArrow</b> 	Scroll the display down one line.
<b>LeftArrow</b> 	Scroll the display left 4 columns.
<b>RightArrow</b> 	Scroll the display right 4 columns.
<b>PgUp</b>	(inside the window) Scroll the display up one page.
<b>PgDn</b>	(inside the window) Scroll the display down one page.
<b>Ctrl-PgUp</b> or <b>Home</b>	Go to the beginning of the history list.
<b>Ctrl-PgDn</b> or <b>End</b>	Go to the end of the history list.
<b>Ctrl-D</b>	Delete the selected line from the history list.
<b>Enter</b>	Execute the selected line.
<b>Ctrl-Enter</b>	Move the selected line to the command line for editing.

You can view the command history in a scrollable command history window, and select the command to modify or re-execute from those displayed in the window. To activate the command history window press **PgUp** or **PgDn** at the command line. A window will appear in the upper right corner of the screen, with the command you most recently executed marked with a highlight. (If you just finished re-executing a command from the history, then the next command in sequence will be highlighted.)

The display is not circular as it is at the prompt; it has a fixed beginning and end. The **Ctrl-D** (delete from history) key works within the history window as it does at the command line.

Once you have selected a command in the history window, press Enter to execute it immediately, or **Ctrl-Enter** to move the line to the prompt for editing (you cannot edit the line directly in the history window).

You can bring up a “filtered” history window by typing some characters on the command line, then pressing **PgUp** or **PgDn**. Only those commands matching the typed characters will be displayed in the window.

See [Popup Windows](#) for information on customizing window position, size, and color.
