Int 21H, AH=55H

Version

2 and higher

Brief

CREATE CHILD PSP

Family API

Input

```
AH = 55h
DX = segment at which to create new PSP
SI = (DOS 3.0+) value to place in memory size field at DX:[0002h]
```

Return

```
AL destroyed
```

Notes

creates a “child” PSP rather than making an exact copy of the current PSP; the new PSP's parent pointer is set to the current PSP and the reference count for each inherited file is incremented

(DOS 2.0+) sets current PSP to DX

(DOS 3.0+) marks “no inherit” file handles as closed in child PSP

this function is implemented using the same code as AH=26h, so unlike other DOS 2+ functions, it does not return status in CF, instead returning status in AL as DOS 1.x functions do (but it never puts

an explicit return value in AL)
