

This is part of **Family API** which allow to create dual-os version of program runs under OS/2 and DOS

**Note:** This is legacy API call. It is recommended to use 32-bit equivalent

## DosGetCp

This call allows a process to query the current process code page and the prepared system code pages.

### Syntax

```
DosGetCp (Length, CodePageList, DataLength)
```

### Parameters

- Length (USHORT) - input : Length, in bytes, of CodePageList. This length should be at least 2 bytes. If the length is less than the bytes needed to return all the prepared system code pages than the returned CodePageList is truncated.
- CodePageList (PUSHORT) - output : Address of the list of available system code pages. The format of the information returned in this list is:
  - 1 - Current code page identifier
  - 2 - The first prepared code page
  - 3 - The second prepared code page
  - N - Other prepared system code pages.
- DataLength (PUSHORT) - output : Address of the length, in bytes, of the returned data.

### Return Code

rc (USHORT) - return:Return code

- 0 NO\_ERROR
- 473 ERROR\_CPLIST\_TOO\_SMALL

### Remarks

If the process code page identifier was previously set by [DosSetCp](#) or inherited by a process, it is returned to the caller.

An input list size (length) of two bytes returns only the current process code page identifier. If CodePageList length is too small to hold all the available information, then as much information as possible is provided in the available space and ERROR\_CPLIST\_TOO\_SMALL is returned.

If no codepages were prepared with the CODEPAGE command, a length of two and current codepage identifier value of zero is returned.

## Family API Considerations

Some options operate differently in the DOS mode than in OS/2 mode. Therefore, the following restriction applies to DosGetCp when coding for the DOS mode:

The current process code page, and no more than one prepared system code page, is returned.

## Bindings

### C

```
#define INCL_DOSNLS

USHORT rc = DosGetCp(Length, CodePageList, DataLength);

USHORT Length; /* Length of list */
PUSHORT CodePageList; /* List (returned) */
PUSHORT DataLength; /* Length of list (returned) */

USHORT rc; /* return code */
```

### MASM

```
EXTRN DosGetCp:FAR
INCL_DOSNLS EQU 1

PUSH WORD Length ;Length of list
PUSH@ WORD CodePageList ;List (returned)
PUSH@ WORD DataLength ;Length of list (returned)
CALL DosGetCp

Returns WORD
```

## Example

This example gets the current code page and then up to 3 other prepared codepages.

```
#define INCL_DOSNLS

USHORT CpList[8];
USHORT CpSize;
USHORT rc;

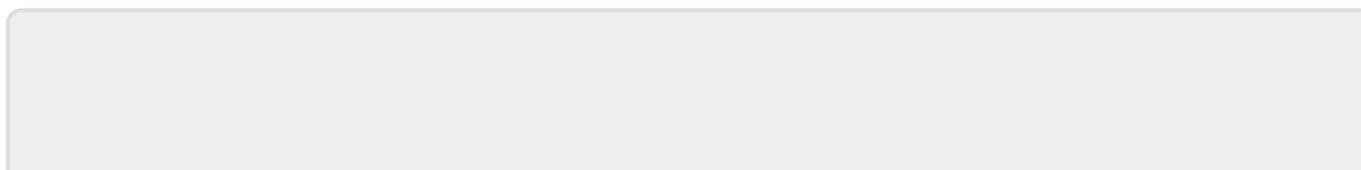

rc = DosGetCp(sizeof(CpList), /* Length of list */
             CpList, /* List */
             &CpSize); /* Length of returned list */
```
