

18

Brief

Get current directory

Input

- DL = drive number (00h = default, 01h = A:, etc)
- DS:SI → 64-byte buffer for ASCIZ pathname

Return

- CF clear if successful
 - AX = 0100h (undocumented)
- CF set on error
 - AX = error code (0Fh) (invalid drive)

Notes

the returned path does not include a drive or the initial backslash

many Microsoft products for Windows rely on AX being 0100h on success
